

A collage of bamboo products. On the left, a bamboo speaker with a white mesh top and a purple light ring. In the center, a bamboo case containing two pens with silver and bamboo barrels. On the right, several bamboo kitchen utensils, including a large slotted spoon and a smaller spoon, resting on a white wooden surface.

**IMPRESSION** 

# DO YOU KNOW HOW ECO-FRIENDLY YOUR LAST “GREEN” PURCHASE REALLY WAS?

The Green IMPRESSION collection is unique in the promotional products market. It gives you clear information on how ecological a giveaway is, in a single glance. The eco-friendly alternatives from the IMPRESSION assortment are organized in three categories, based on the percentage of ecological materials used in the production. Each category has its own, instantly recognizable shield.

Contains products  
made of **10 – 30%**  
ecological materials.

Contains products  
made of **30 – 60%**  
ecological materials.

Contains products  
made of **over 60%**  
ecological materials.

# IMPRESSION

Some ecological materials are easy to identify, while others may be a little more surprising. On the next page you will read about the materials for the Green IMPRESSION products and what makes them environmentally friendly.

**We provide the options and the information,  
but the choice is yours:**

**How green are you?**

Regardless if you choose for 30% green, or 60% green, or anything else, the choice is 100% safe. All items are 100% certified, conform EU laws and regulations. The IMPRESSION brand has always been the safe way to give. Safe for everyone, from manufacturer to consumer. With the Green IMPRESSION branch we supply items that are also safe for the environment.

## Wood

Wood is a renewable resource. It is one of the most environmentally friendly materials. While the trees grow they absorb carbon dioxide and produce oxygen. Pine is the most sustainable as it is a fast growing tree. Wood is durable and gives the product a natural look.

## Bamboo and bamboo fibre

Bamboo is a type of wood that is especially eco-friendly since it is a natural resource that renews quickly. Bamboo regrows extremely fast, is naturally pest resistant (no pesticides needed), and requires less water to grow than other plants. Bamboo fibre is a versatile material suitable for making both drinking cups and fabrics and is quickly biodegradable.

## Cork

Cork is harvested only from the bark of the cork tree, meaning that the tree itself is not felled for the production of cork products. The tree simply regrows its bark, making cork a material from a highly renewable resource. Cork is both recyclable and biodegradable, meaning there is no polluting waste.

## Wheat straw

Wheat straw is made of the leftover stalks after the wheat grains are harvested. When treated as waste, the stalks are burned, which leads to air pollution. When reclaimed, the stalks are an environmentally friendly material as they come from an extremely efficient, renewable resource in the food chain. Mixing wheat straw with plastic creates a sturdy material that requires far less plastic to make.

## Stone paper

Stone paper is a new alternative to paper made from wood pulp. It is by definition not real paper, but a paper-like material made from calcium carbonate and polyethylene, which makes it water and tear resistant as added bonuses. The production of stone paper uses no water, unlike the copious amounts of water used for making paper from wood pulp, which is why stone paper is a more ecological alternative.

## Recycled paper

The production of paper requires a lot of water, which is considered a strain on the environment. Paper products should not go to waste but be recycled instead, which saves on energy and water consumption, and reduces waste.

7

## RPET

Recycled PET, or RPET, saves on the use of fossil energy. Production of RPET emits 70% less carbon dioxide and uses 90% less water than polyester. Instead of polluting the oceans, millions of throwaway PET bottles are recycled into new products.

## PLA

PLA is short for Polylactic Acid, a type of polyester, which doesn't sound very "green". But PLA is made from renewable resources like corn starch and sugar cane and it is a quickly biodegradable material.

8

9

## Cotton

Cotton is a natural and sustainable resource. After harvesting, most of the cotton plant is used, not just for the production of cotton, so there is little waste. On top of that, products made of cotton are biodegradable.

## Linen

Linen is made from flax plant fibres. The flax plant requires little water to grow; only rainwater, no additional irrigation. It takes little energy to process flax and the entire plant is used, leaving no waste. Linen is strong, so it is long-lasting, but the product is also both entirely biodegradable and recyclable.

10

11

## Jute

The outer stem and skin of the jute plant are used to make jute: a hard-wearing material that is recyclable, biodegradable, and compostable. The jute plant is ready for harvest in as little as 4 to 6 months and has a high crop yield, making it a very efficient resource. It requires no pesticides or fertilization and even enhances soil fertility for future crops.

## Coffee grounds

Across the world people drink around 400 billion cups of coffee annually. Coffee grounds are a by-product of every single cup of coffee brewed. Rather than letting tonnes of coffee grounds go to waste every single day, the material can be recycled into useful products. This reduces global waste and puts no extra strain on resources.
